Publications of H. A. Kierstead

14. The chromatic number of graphs which induce neither $K_{1,3}$ nor $K_5 - e$, *Discrete Math.* 58 (1986) 253–262 (with James H. Schmerl).

30. Computing the dimension of N-free ordered sets is NP-complete, Order 6 (1989) 133–135 (with S. G. Penrice).

35. Radius two trees specify χ-bounded classes, J. Graph Theory 18 (1994) 119–129 (with S. G. Penrice).

56. Classes of graphs that exclude a tree and a clique and are not vertex Ramsey, Combinatorica 16 (1996) 493–504 (with Yingxian Zhu).

74. The relaxed game chromatic number of outerplanar graphs, J. Graph Theory 46 (2004) 68–78 (with Charles Dunn).

92. Star coloring bipartite planar graphs, *J. Graph Theory* 60 (2009) 1–10, (with André Kündgen and Craig Timmons).

103. Every 4-colorable graph with maximum degree 4 is equitably 4-colorable, J. Graph Theory, 71 (2012) 31–48, DOI 10.1002/jgt (with A. Kostochka).

115. The \((2k - 1)\)-connected multigraphs with at most \(k - 1\) disjoint cycles, *Combinatorica*, **37** (2017) 77–86, DOI: 10.1007/s00493-015-3291-8 (with A. V. Kostochka and E. C. Yeager).

128. Every planar graph is 1-defective (9, 2)-paintable, submitted (with Ming Han and Xuding Zhu).
